Job Description

You will be responsible for designing and building products that are highly scalable, extensible, and maintainable and are used by the largest companies in the world.

You will work in a highly agile environment, collaborating with product managers, engineers and customers, as well as with our leadership team, using iterative and test-driven design methods.

Qualifications

- Bachelor degree in computer science or similar engineering discipline.
- 4 years of experience building Java applications.
- Excellent understanding of Object-Oriented Design principles and patterns.
- Experience with the Spring framework, JDBC, Maven and other Java related technologies.
- Experience building applications using Relational Databases like PostgreSQL or Oracle.
- Experience and desire to work within a fast-paced, iterative development environment; experience with Agile development is a strong plus.

Experience with these technologies is a PLUS.
- RabbitMQ
- Apache Camel
- Docker/Kubernetes
